

B)	What is a Digital Elevation Model (DEM)? List some applications of DEM. How does a DEM differ from other elevation data models?	Recall CO:3	6
C)	Describe the different types of map projections used in GIS. Provide examples of applications for each type of projection.	Understand CO:3	6
Q.4 Solve Any Two of the following.			12
A)	List and explain steps involved in GIS analysis.	Understand CO:4	6
B)	Write a note on Quality assessment of GIS.	Understand CO:4	6
C)	Explain the types of non-spatial data attributes typically found in GIS datasets. Describe the significance of nominal, ordinal, interval, and ratio data types in GIS analysis, giving examples of each.	Recall CO:2	6
Q. 5 Solve Any Two of the following.			12
A)	Write short note on: Key elements of Map.	Recall CO:5	6
B)	Explain the concept of vector overlay in polygon. Also, draw the diagram of following vector overlay examples: i) impose ii) stamp iii) join iv) compare	Apply CO:5	6
C)	Identify and explain three types of errors commonly encountered in GIS. How can these errors impact the accuracy of GIS analysis?	Understand CO:5	6
